贯通式货架
Drive in drive through racking

贯通式货架仓库利用率高,适合少品种,大批量的货物存放,托盘一个接一个按深度方向存放在支撑轨道上,增大了存储密度,提高了空间利用率.实现先进先出,或先进后出的管理.

Using minimal space for access aisles and lanes, Union's Drive-in racking provides a high-density and very space-efficient bulk storage system. With the first pallet into a lane being the last out, stock selectivity is restricted, but when loads are delivered and dispatched in batches, this is not a difficulty. Pallets are stored on joist in the depth of the racking and trucks enter to deposit or retrieve loads.

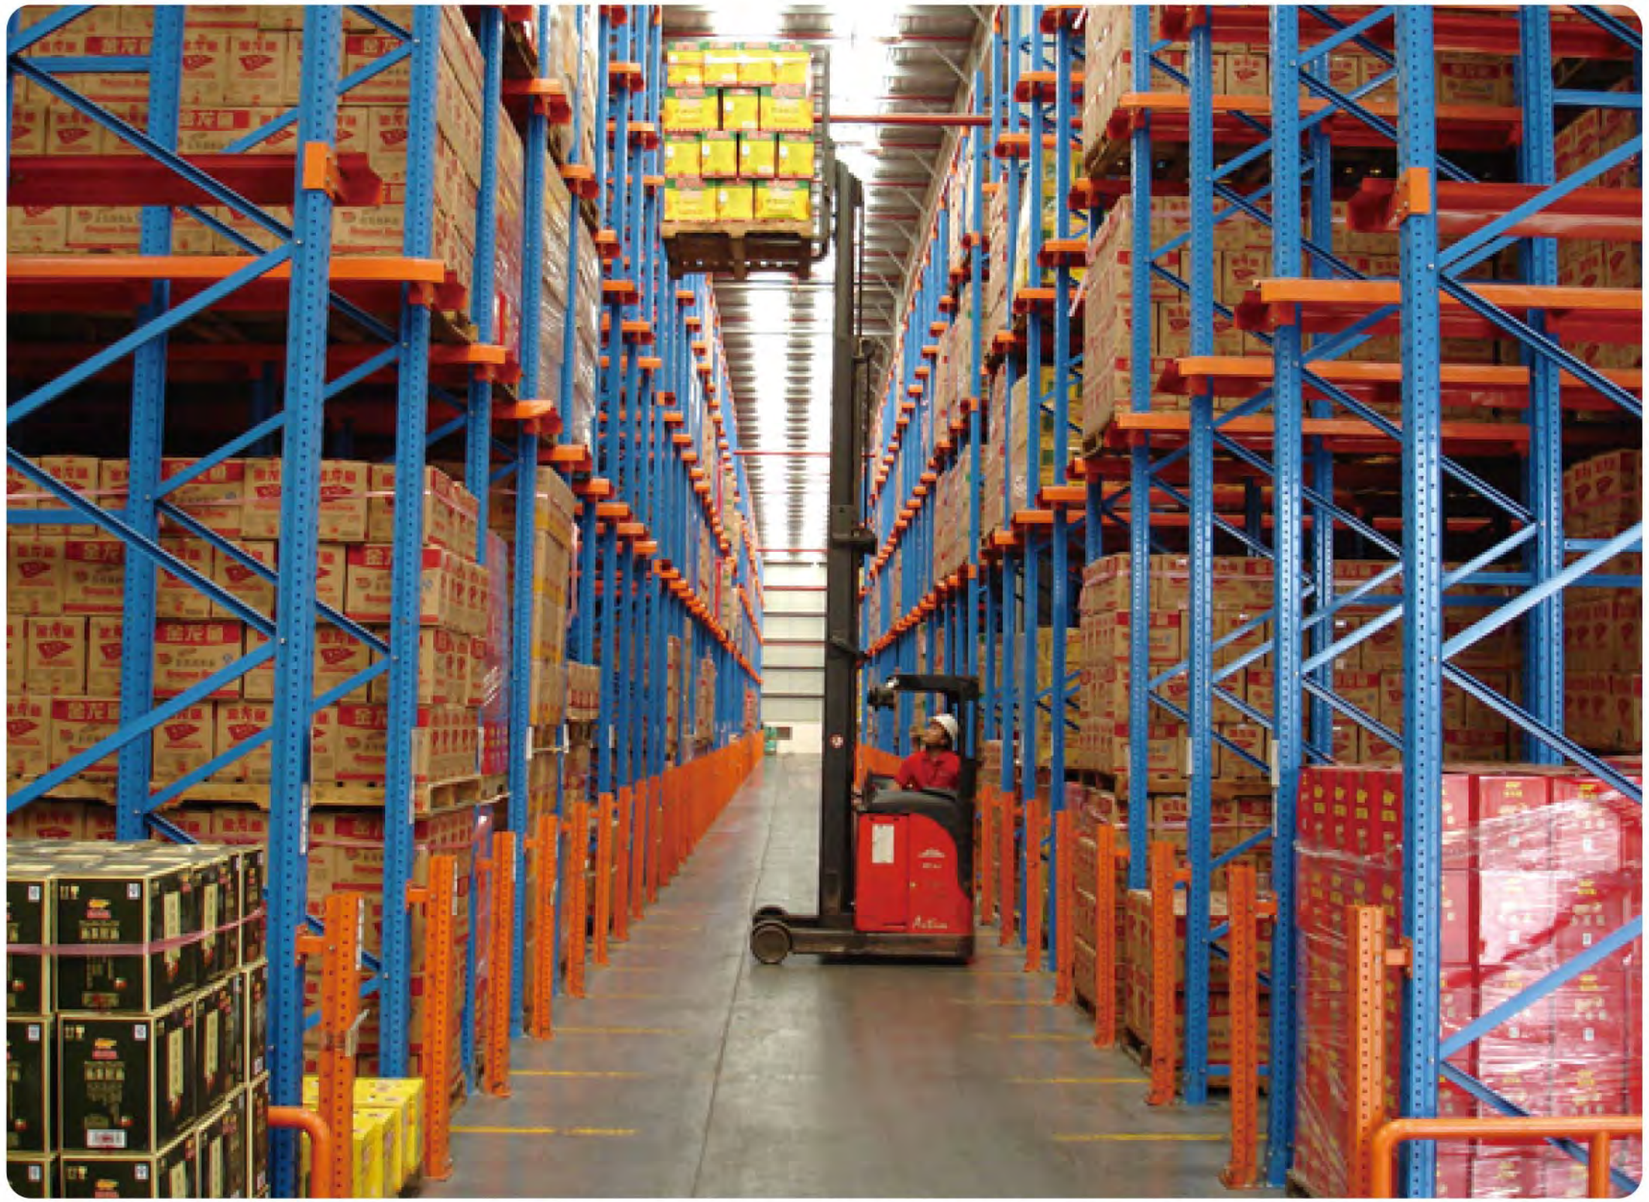

Drive in drive through racking · 贯通式货架
Jiangsu Union Logistics System Engineering Co.,Ltd.

贯通式货架驶入和驶出式系统所占用的空间较小，可以提供最大仓储容量。

Drive in drive through racking · 贯通式货架

功能介绍:

驶入和驶出式系统所占用的空间较小，可以提供最大仓储容量。该系统非常适合存储超大量同质产品。驶入式或双通道系统由连续的货架操作巷道构成，仅配有一条装载和补货过道。装载和卸载通过沿着夹道驶入货架的平衡重式叉车和前移式叉车来执行。驶入式货架在操作时遵循先进后出原则，因此只适用于存放量充足且需要多条巷道以确保库存周转的产品，比普通的托盘货架提高50%的空间利用率.

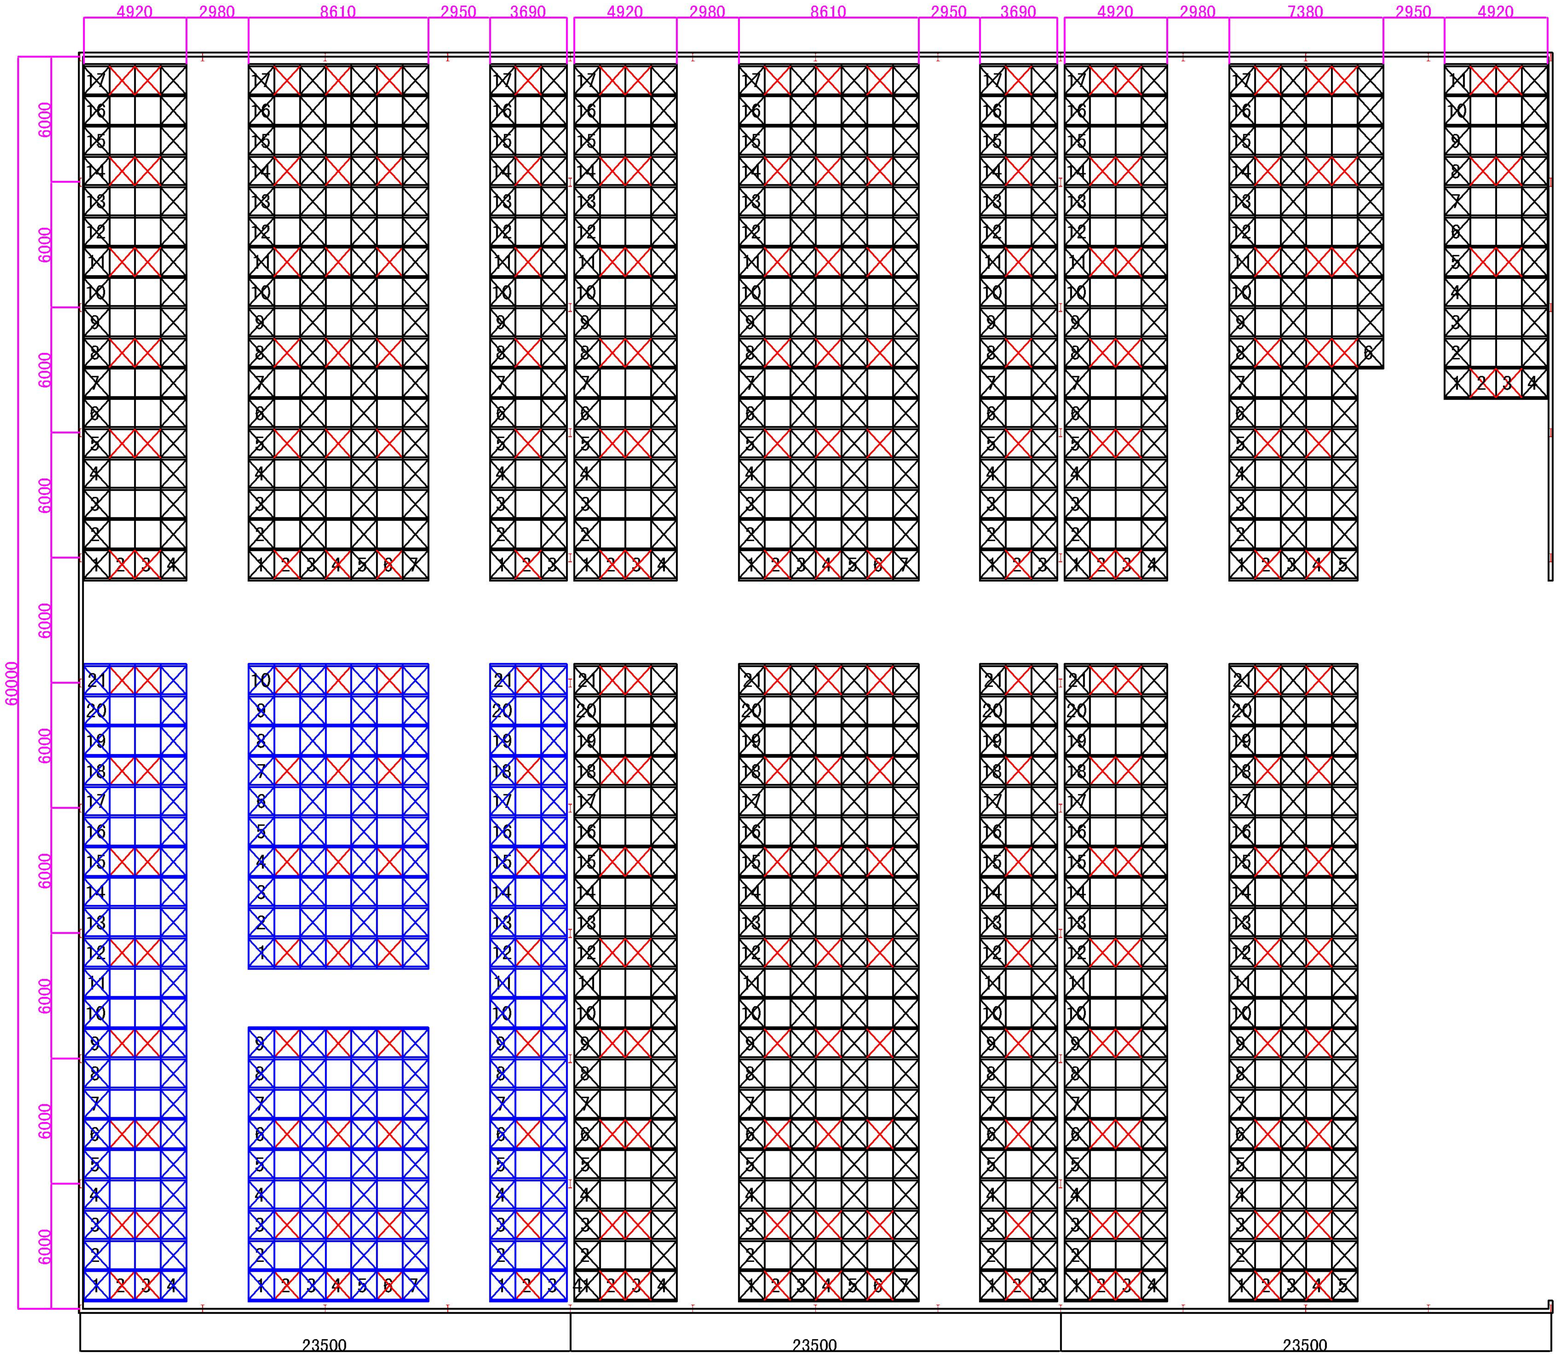

操作驶出式货架时，入口过道可以位于驱动区的任意一侧。驶入式货架系统的优势在于可以独立执行拣选和补给，支持按"先进先出"[FIFO] 原则操作。

Feature:

1、Made of continuous rows of upright frames interconnected by spacers
2、Forklift trucks drive along each aisle (lane) to store or retrieve pallets
3、Each aisle consists of several levels of pallet support rail
4、Pallets are placed on the pallet support rail one after another along the aisles
5、Top and back bracings are used to stabilize system structure
6、All components are epoxy powder coated except the galvanized footplates
7、Accessories include shim, upright protector, forklift guide rail
